Allowable Subject Matter

1. Claims 1, 3, 4, 6-11, 19, 21-22, 24-31, 33-38, 40-46, 49, 51, 53, 55-59, 62, 64 and 66 are allowed.
2. The following is an examiner's statement of reasons for allowance: The present invention is directed to the design and optimization of communications systems using comparisons of predicted performance metrics and desired performance metrics in a computerized model of an environment. Each independent claim identifies the distinct feature of comparing under computer control the predicted performance metric to the desired performance metric, wherein the steps of specifying components or specifying locations is performed automatically, by computer control, multiple times until a desired comparison result is obtained. The closest prior art, "SMT Plus 1.0 User's Manual", authored by Skidmore et al. teaches an interactive tool that allows users to create and modify a computerized floor plan of an environment via specification of components and locations. The prior art fails to teach the computer automatically specifies components and locations successively until a comparison of the predicted performance metric to the desired performance metric produces the desired results, and thus fails to anticipate or render the above limitations obvious.
3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
